

WELCH ALLYN HOLTER RECORDERS

Brownlie Design partnered with Global Instrumentation to design a series of ambulatory ECG (Holter) recorders for Welch Allyn. These patient-worn devices record cardiac rhythms over a period of time. The new designs feature advanced electronic function along with a distinctive appearance and ergonomic contouring. The HR 100 records for up to 48 hours and wirelessly transmits the data. The HR 300 features a removable SD memory card, and has programming and real-time monitoring features. These devices are typically worn on a belt and have soft, comfortable, “non-threatening” curves. Both units were designed for easy battery access. Overmolded rubber adds to unit comfort and sure-handed manipulation.
