# Waterway pool mobile with Ionic and Pubnub

Assuming the
challenge of a leading company

Waterway Plastics is an American company that has been a leader in its field for more than 45 years. It has an extensive product line that serves the pool, spa, bathroom and white segments of the market. As part of its expansion and growth Waterway required a mobile application that could control hardware to interact with the entire pool and allow remote functions such as turning on lights, valves, modes, etc. Rootstack, with his vast experience acquired over hundreds of successful projects, accepted the challenge that waterway had.

Our best api
service with waterways

Rootstack developed a custom API for Waterway, which is responsible for managing devices per user of Waterway, the user can create his account, which ends in the API and finally the user can add or configure devices to his user.
