

Accelerated Oil Technologies

They needed a structured solution for a decentralized environment – cue Beanworks!

AOT is a decentralized oil operator in Canada and the US. Kim Carr managed an outsources team for their accounting needs, but with multiple locations and a third party accounting firm demanding insight in their accounts payable, Carr needed to avoid the high cost and complexity that goes hand in hand with sharing PDFs and overnight packages across multiple people in a wide range of roles and locations. What AOT needed was a structured solution for a decentralized environment.

Cut processing times by 50%.

No more lost invoices!

Challenge

AOT is a decentralized oil operator in Canada and the US. Kim Carr managed an outsources team for their accounting needs, but with multiple locations and a third party accounting firm demanding insight in their accounts payable, Carr needed to avoid the high cost and complexity that goes hand in hand with sharing PDFs and overnight packages across multiple people in a wide range of roles and locations. What AOT needed was a structured solution for a decentralized environment.

Decision Making

Carr scoured the internet, looking at her options as far as accounting and software resource sites. Bombarded by expensive application requiring upwards of \$30,000 in implementation fees, licensing and user costs – it was time for Beanworks to enter the picture. We promised a quick implementation, lower pricing and a straight forward interface, or “Well packaged and user friendly,” as Carr puts it. With cloud access, easy set up and reasonable prices, Carr’s decision was pretty easy: choose Beanworks.

Implementation

We impressed the team at AOT with our customer support throughout the process of implementing our AP automation solution. With very few meetings needed to get AOT up and running with Beanworks, and any hiccups addressed with lightning speed, the staff loved it!

Achievements

“There is a known system, invoices are only in one place and nothing is lost. People don’t get stuck or lost in the process,” explains Carr, “Vendors also have really appreciated the increase in orderliness and timeliness.” AOT’s third party accounting team were able to decrease their processing times by as much as 50%, which meant a measurable impact to their bottom line. Now, Carr has taken the role of Controller at Petro Shale, an oil-weighted development and production company operating in both Canada and the US. She was so impressed with her experience with Beanworks, she brought it over to Petro Shale where the implementation process was even better!
