

FLATWORLD PROVIDED ACCURATE SEMANTIC ANNOTATION OF IMAGES TO A LEADING CLIENT

The Client

The customer is a global company specializing in automation, electrification, and digitization. They are one of the largest developers of resource-saving and energy-efficient technologies. They are also leaders in the supply of systems for the transmission and generation of electricity, as well as in medical diagnostics.

The Requirement

The customer was looking for a reliable service provider who could help them in image annotation services for specific objects. The client provided images via Dropbox and asked us to comment on various objects, such as builders, scaffolding, seat belts, helmets, scaffolding, and so on.

The Challenges

Our team had to face a few challenges while implementing the project -

1. The main challenge of the project was background segregation, human borders, wrong borders, irregular shapes, etc.
2. The project included an annotation of all pixels in the image and the background differentiation through machine learning.

The Trial

The customer chose a test project to evaluate our services based on the results we provide. We allocated two resources to work on the trial project for a two-day period and received 50 images for the project.

Full-time Contract

The customer was impressed with the test project and decided to transfer the entire project of semantic annotation to us. We assigned two highly qualified and experienced image annotation experts for the project, who were supposed to comment on about 70-80 photos.

Client Benefits

Our team completed a semantic annotation of all images provided by the client in a short time. They were impressed by our professional approach, the cost efficiency of the project, and the speed with which we were able to achieve results without sacrificing the quality.

Outsource Data Mining Services to Flatworld Solutions

Flatworld Solutions has been a pioneer in providing high-quality [image annotation services](#) and a series of other [data entry services](#) to clients around the globe. We operate through multiple centers across time zones to deliver quality services within a quick time. We leverage the best infrastructure and the latest tools and technologies to deliver the best quality image annotation services.

Are you in need of a reliable image annotation service provider? Then look no further. [Get in touch with us](#) today!
