WellEz on Demand

“We knew we wanted a solution that could scale with our growing business and was easy-to-use for the guys in the field. WellEz helped us with both”

- Dan Wingerson, Director IT – Applications and Data Management, Alta Mesa

Company

Alta Mesa Resources, Inc. is a publicly traded (NASDAQ: AMR, AMRWW) independent exploration and production company. They are focused on the development and acquisition of unconventional oil and natural gas reserves in the eastern portion of the Anadarko Basin referred to as the STACK.

Alta Mesa has a proven track record and focuses on continuous improvement. One of their core mission statements is “exploiting known resources in a repeatable manner,” and this commitment to driving performance through a process is what led Alta Mesa and WellEz to a partnership that has resulted in success on both sides.

Opportunity

In 2013, Alta Mesa was a fast-growing E&P company with a disciplined management process and the flexibility to respond to a changing market. However, the fast pace & manual processes led to data integrity issues within drilling and completion operations. They quickly realized their well lifecycle reporting tools needed to keep up with their ambitious growth strategy.

“Before bringing in WellEz, our reporting tools were difficult to use and allowed for too much free-lance data entry to trust any meaningful operational analysis,” said Dan Wingerson, Director IT – Applications and Data Management, at Alta Mesa Resources. “We knew we wanted a solution that could scale with our growing business and was easy-to-use for the guys in the field. WellEz helped us with both.”

Alta Mesa Uses WellEz on Demand for Sustainable Growth

“WellEz allowed us to enforce data standards in a structured hierarchy, which helped us accurately report on performance and costs”

About WellEz on Demand

WellEz On Demand provides complete well lifecycle reporting, from field data capture and reporting to data analysis and integration. For over 15 years WellEz On Demand has set itself apart from traditional oil and gas software with cloud-based technology, a pay-as-you-grow pricing model, and an easy-to-use application. We can have you up and running in days and scale with your business as it grows.

Solution

Alta Mesa's dedication to being a highly efficient, lean, and fast-moving organization led them to choose Quorum's cloud-based well lifecycle reporting solution, WellEz on Demand.

WellEz on Demand was implemented in late 2013 and quickly added functionality and structure to Alta Mesa's drilling and completion data management and reporting. By utilizing a solution that is cloud-based, configurable, and easy-to-use for the guys in the field, Alta Mesa improved the data quality of their operational database. "WellEz allowed us to enforce data standards in a structured hierarchy, which helped us accurately report on performance and costs," said Dan Wingerson.

Partnering in Success

Alta Mesa quickly saw value in partnering with WellEz to build out some process automation. In addition to capturing and reporting on operational data, Alta Mesa wanted to automate the data transfer between accounting and field operations.

To provide extra insight into cost performance, they needed to normalize AFE information, field cost estimates, and actual invoice data into a single dataset. This meant WellEz and Alta Mesa's AFE management tool must share data seamlessly. "The work that we did on the API to integrate WellEz with our AFE management process was key for us," said Dan. "Viewing this data in one place helps us build better AFE's, reconcile field invoices, and create accurate accrual reports."

Alta Mesa has greatly reduced drilling and completion costs per well. Thanks to operational excellence and a robust data management strategy. They capture clean data from the field, automate back-office processes, and leverage the best in cloud-technology. WellEz is proud to partner with Alta Mesa and looks forward to helping them further their mission of "exploiting known resources in a repeatable manner."
