

ARABIC PROPERTY MANAGEMENT APP FOR ANDROID AND IOS

The Client and Their Requirement

Our client is a Kuwait-based real estate tycoon who owns several properties and wanted an app where they could easily post properties available for rent and for sale. They wanted a property management app in Arabic and English for both Android and iOS operating systems. In addition to this they also wanted a web app which could be used to upload all the property details and images of various properties from the backend.

Project Challenges

Our team of mobile app developers faced the following challenges during the development of the mobile app:

- + The client wanted the app in English and Arabic as well. English follows LTR whereas Arabic RTL navigation, hence care had to be taken while designing the app for two different languages while keeping consumer ease-of-use in mind
- + We had to develop the app for both Android and iOS platforms, complete with all the required features in a very short time

The Solution

Our highly-qualified team of mobile app developers analyzed all the requirements of the client and provided the following solution:

- + The property management app was built for Android as well as iOS
- + The app has an option to switch between the English and the Arabic version, without affecting the UI at all
- + The app has the option of performing customized searches of properties based on location, facilities, cost, etc.
- + The app is integrated with Google Maps which shows various nearby properties on the map to the customers thereby helping them find a suitable place very easily
- + The app has a payment gateway which allows users to pay their rent right from the app
- + The app also has an option to book visits to a particular property in case customers want to visit and see the place on their own
- + Existing tenants can make maintenance requests from the app without any hassles and schedule appointments at a time of their own choosing

Project Results

The dedicated team of mobile app developers which was assigned to this project completed it within the decided timeline. Our vast experience in the field of Arabic app development helped us understand the needs and the unique cultural differences of the client in order to build this bilingual app without any hassles.

Choose Flatworld Solutions for Flawless Mobile App Development Services

Flatworld Solutions has been in the [mobile app development](#) domain for over a decade now and has thousands of clients around the world.
