

## FLATWORLD SOLUTIONS ASSISTED A RENOWNED ARCHITECTURAL FIRM IN THE UK WITH ARCHITECTURAL DRAFTING AND DETAILING SERVICES

*Read how FWS helped a British engineering company to develop a comprehensive architecture plan in a short period of time with architectural drafting and detailing services.*

### The Client

The client is an architectural design and engineering service provider having a pan-European market presence. Based in the UK, they serve production, retail and financial institutions with their exceptional architectural consultations, design, and plans.

### Client's Requirements & Challenges

The client came to Flatworld Solutions with their requirement of building architecture plan based on their field research. They requested us to design the architectural plan and create the elevation as per the photos in the map and site. They sent us the SLD (single line diagram), sketch (the plan of size and roof height), elevation recording, and site location (Google Maps)

The main challenge for us was to work on drafting and detailing and churn out at least two plans every week. To make this happen, we assembled a professional team of drafter and quality control expert. Our team came to the conclusion that each architectural plan would take 15 hours to complete.

After the project launch, we used a limited input (AutoCAD files and Map PDF) to visualize the plan. Such projects were new to our team, so they had to make the best of the inputs and develop the plan within the delivery date.

### Our Solution

After we got the sketches (roof elevation, wall thickness, etc.), site survey and property data, we started the project and leveraged AutoCAD tool to plan the draft. The team went through the photographs sent by customers and developed the elevation. Later, they conducted a thorough quality review and sent the documents to the customer for evaluation. The customer suggested making some changes, which the team incorporated and sent the final document.

### The Results

After we got the sketches (roof elevation, wall thickness, etc.), site survey and property data, we started the project and leveraged AutoCAD tool to plan the draft. The team went through the photographs sent by customers and developed the elevation. Later, they conducted a thorough quality review and sent the documents to the customer for evaluation. The customer suggested making some changes, which the team incorporated and sent the final document.

### Result

Our architectural drafting and detailing services helped the client develop accurate plans as per their expectation. Given the time constraints and the heavy workload, they are very satisfied with our service.

### Outsource Architecture Drafting & Detailing Services to Flatworld Solutions

With 16 years of experience in engineering services, Flatworld Solutions excels in [architectural designing and detailing services](#) (CAD), and other [architectural services](#). We have served companies from around the world and helped them with many engineering solutions.

[Contact us today](#) for individual quotes for CAD (Architectural Drafting and Detailing) services. Our representative will contact you immediately.
