Easily Collaborate on Business Processes

When talking about business processes, it's important to be able to quickly draw out the flow of information and diagram the relationship of objects. Elements.cloud is a super user friendly tool for collaborating on those drawings and lets you take white board drawings and turn them into colorful, clean products. And that's just a start of the functionality. I also love the ability to record user stories in a form instead of a blank text box so you capture all pieces of a user story. Great company. Great product.
