

CHOOSING THE BEST FROM THE REST

"Support can help with any problem."

-Andreas Huber,
Factorysense

BENEFITS

Saved 50-100 hours of development effort.

MVVM capabilities.

Great support from Syncfusion.

CHALLENGE & SOLUTIONS

These days, the markets for any product seem saturated. There are entire walls dedicated to toothpaste in the supermarket. There are thirty varieties of mac and cheese, a dozen kinds of light bulbs, and seemingly endless varieties of wheat bread. So how do you choose?

Well, when it came to selecting WPF components for his personal projects, Andreas Huber of Factorysense had the advantage of choosing what he knew worked: Syncfusion.

"I knew Syncfusion had good support, a rich portfolio of controls, an appealing appearance, and good performance," said Huber. "Also, it's an advantage to me to use the same technology for my private projects as for my day job."

Huber had tried other companies' controls in the past. However, because both his current and former employers had chosen Syncfusion's controls, he knew they were exactly what he needed to build his application, which analyzes logistics systems.

"It saved me about 50 to 100 hours of development effort," Huber said. He used the Syncfusion data grid, accordion, chart, color picker, pivot grid, and date-time range navigator components. "The chart control is fast even for thousands of data points," he added.

And since, unlike toothpaste, Syncfusion's components can be tried for free, developers not lucky enough to be using them at work can discover they're the best choice, too!
