

City Of London Club Gains Time And Cost Savings With Hosted Version Of Rendezvous Meeting Room and Events Management Software

The City of London Club, located in the heart of the financial district, traces its history back to the 1830s. This exclusive private members' club, located in Old Broad Street near Liverpool Street Station, was recently refurbished, and now offers state-of-the-art conference and banqueting facilities to its City membership base.

One aspect that needed no refurbishment was Rendezvous SaaS, the meeting room, conference and catering management solution from NFS.

"Rendezvous has dramatically simplified our booking process and freed up staff time to better follow up leads and develop new business opportunities for the Club," says Ian Faul, Club Secretary.

He adds: "As the event and banqueting business is an important part of our revenue stream, we have been delighted to find an affordable software package to help us develop this important area of the Club's operation."

According to him, the savings offered by the hosted option have played a big role both in selection of Rendezvous and continuing use.

"The fact that NFS were able to deliver Rendezvous as a hosted solution, requiring no IT infrastructure investment by the Club, made the proposition even more attractive. We have not had to take on additional servers or IT support."
