ABOUT

Worthington Industries is a global, multi-site industrial manufacturing organization. As North America's premier steel processor for the last 60 years, they provide customers with a wide range of capabilities, products and services for the automotive, construction and agriculture industries.

"

CSS brought expertise and capabilities that we didn't have. They didn't come in with a cookie cutter approach, they listened to us and made this project successful.

Matt Schlabig, Vice President and Chief Information Officer

"

CHALLENGES

Worthington Industries has made several acquisitions as part of their growth strategy. The global manufacturer recently acquired an Engineered Cabs division that lacked a sound technology solution. To maintain safety and supply chain visibility, Worthington needed to integrate their existing Oracle E-Business Suite (EBS) solution to the newly acquired division.

THE CSS APPROACH

CSS leveraged out-of-the-box functionality within EBS along with standard best practices to quickly get the new division up and running. By deploying Worthington's 21 modules within EBS throughout their three business units, CSS provided them solutions footprint they needed.

RESULTS

Integrating EBS allowed Worthington to solve their technology issues and gave them visibility to inventory, supply chain, purchasing, planning and transportation within their new division.
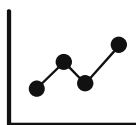

21 modules implemented across three business units

Zero customizations

Cloud ready

Improved visibility to the supply chain

Safety standards for Cabs division
