

“ Our collaboration with Triantz has been exceptional with conspicuous benefits. The platform now effectively manages customer reference data, while addressing data accuracy and quality issues. ”

CTO

Large insurance company

MY PROBLEM

We needed to implement a MDM platform to reduce the time and manual effort needed for analyzing and rectifying the accuracy, quality, and management of customer data obtained from different sources.

SIMPLY SOLVED

Triantz successfully developed a CDI Hub which could load and remediate customers' information from multiple sources to base objects. Interfaces for the Hub to interact with the source and downstream applications were also developed.
