

DATA ENTRY FOR ONLINE JOB PORTAL WITH 98% ACCURACY

Flatworld Solutions' Data Entry Services Help Client Their Backlog in a Short Time

The Client

Flatworld Solutions was approached by a client who had an online job application portal that helped people, especially students, apply for jobs of their choice.

The Requirement

The client was looking for a partner who could provide data entry services for online job portals. The client's requirements entailed uploading resumes of candidates, creating email IDs and accounts, and apply for jobs on behalf of the candidates. The client's main aim was to make the job application process easier for the candidates, who were mostly students.

The client contacted Flatworld Solutions with their project due to Flatworld's swift response, extensive experience in data entry services, and their ability to meet the client's unique requirements.

The data management team at Flatworld Solutions had also shared a few samples with the client that allowed the client to gauge the team's performance. The client was highly satisfied with the samples and finally outsourced their requirements to Flatworld.

The Problems

The project was a large undertaking. The team at Flatworld Solutions received details for more than 1000 candidates per month that needed to be uploaded and entered. Different job portals had different formats, so our team would need to adjust to each job portal, and follow all of the instructions — from creating accounts to updating information, and more, all in different ways depending on the portal. This proved to be quite time-consuming and affected the turnaround time.

The Solution

For smooth execution and fast turnaround, Flatworld Solutions assigned two resources to work exclusively on this project. The team studied the format of every job portal so that they could swiftly update candidate details in each portal in a short time with minimum error. At each step of the project, the Quality Assurance (QA) team at Flatworld performed strict quality checks to ensure that the details uploaded on the portal are accurate and error-free.

The Results

Flatworld Solutions helped the client clear their backlog by completing 2,000 uploads to various job portals per month with an accuracy level of more than 98%. Our cost-effective and efficient data entry services helped the client reduce their costs by almost 50%. As a result, the client was highly satisfied with the services provided by Flatworld and outsourced more work to us, establishing a long-term relationship with us.

Choose Flatworld Solutions for High-quality Data Entry Services
