

**ENHANCING EFFICIENCY ENERGY
COMPANY STREAMLINED LEASE
MANAGEMENT WITH DATAMATICS**

DATAMATICS

The client, one of India's largest integrated power companies, plays a key role in the nation's energy sector, driving innovation and sustainability in power generation, transmission, and distribution. Headquartered in Mumbai, it is known for its strong commitment to renewable energy. With a growing footprint and focus on operational excellence, the company leverages technology to boost efficiency and better serve its expanding consumer base.

The Challenge: Energy Giant's Struggle for Efficiency

As one of India's largest integrated power companies, the client was committed to operational excellence and employee satisfaction. However, as the company expanded, managing company lease accommodations became increasingly complex. Manual processes, decentralized approvals, and fragmented communication channels created inefficiencies, slowing down operations and impacting overall productivity.

The Chief Financial Officer (CFO) grew increasingly concerned about the financial discrepancies and delays in lease approvals. The lack of an automated system led to prolonged processing times, errors in financial transactions, and challenges in tracking lease-related expenses.

To maintain agility and ensure seamless operations, the CFO recognized the need for a digital transformation—one that would streamline lease management, enhance financial accuracy, and optimize workflows for greater efficiency.

The Solution: eHousing Lease Automation

The client partnered with Datamatics to develop the eHousing System for managing company lease accommodations. The system streamlined the creation and approval of Company Lease Accommodation (CLA) requests, ensuring a smooth workflow between employees, Heads of Departments (HODs), and ES&A Coordinators.

Beyond approvals, the solution facilitated broker assignments, scheduled site visits, and enabled employees to accept flats digitally, reducing manual interventions and accelerating the leasing process.

The eHousing System also automated the generation of essential lease documents, including Offer Letters, Management Memos, Letters of Intent (LOIs), Allotment Letters, and Lease Agreements. Datamatics empowered the company with real-time visibility, improved operational control, and a significantly optimized lease management workflow.

Impacts: Streamlined Lease Processes

Increased operational efficiency by 70%

leading to faster decision-making and enhanced productivity across teams

Faster response times

& improved satisfaction among tenants with efficient communication between residents and administrators

Resulted in 28% cost savings

by minimizing the need for additional administrative resources and reduced the risk of financial errors

ABOUT **DATAMATICS**
