

# Invoices Solution & Outsourcing

CUSTOMER STORY

# More Speed & Dynamics in Data Acquisition

At Mercedes-AMG GmbH, processing invoices could feel like trying to get too many gears to line up. For years, the Affalterbach-based company has relied on Doxis, for digital capture and processing, making the whole system smoother and giving them both speed and transparency.

To achieve this, Doxis deployed an invoice solution. It was tailored to Mercedes-AMG's specific needs so it can handle different invoice types and complex processes with ease.

Another challenge was the sheer volume of invoices. At first, Mercedes-AMG managed the recording, digitisation and validation of incoming documents in-house. Later, the company chose to hand over the entire document and process digitisation to Doxis' full service offering, the RedPaperCenter.

## Highly dynamic Invoice Entry

The sports car manufacturer created a catalogue of criteria for the digital recording and processing of incoming invoices. The RedPaperCenter ensures that invoice capture, validation and forwarding all meet these requirements. AMG's application support team works closely with the RedPaperCenter in regular review sessions to keep everything in sync.

Where needed, the entire accounting process is adjusted, from digitisation in the RedPaperCenter to document processing in SAP.

For the past three years, the Doxis RedPaperCenter has handled Mercedes-AMG's document and process digitisation with high quality and a 24-hour response service.

Mercedes-AMG GmbH is the performance and sports car brand of Mercedes-Benz.
