EXHAUSTIVE DATA COLLECTION & COLLATION FOR A NATURE PORTAL

The Client

Flatworld Solutions was contacted by a company looking to create an app and a website that would be the number one source for an entire classification of nature. Essentially, the company wanted to be an exhaustive encyclopedia of information for that specific nature topic.

The client contacted FWS online, and was impressed with our ability to compile vast amounts of research information, and turn it into a working database, a usable website, and a mobile app.

The Problems

The primary challenge for Flatworld Solutions on this project was that the data collection and processing was supposed to be extremely extensive. It had to involve a significant amount of collecting, analyzing, and systematically collating that information under strict deadlines and time frames. The project required a large team of skilled resources that would all have to work simultaneously on the requirements.

The Solutions

To handle such humongous project volume, Flatworld Solutions internally trained several skilled downloaders to collect the required information without causing problems with search engine protections - search engines have safeguards to prevent large data queries.

Flatworld Solutions also put 15 resources on the project so that it could be completed before the stipulated deadline. The project was then split into smaller groups with teams that specialized in following aspects of the project -

+ Downloading
+ Collating
+ Editing
+ Image Enhancement
+ Quality Checking

We created an efficient system to help ensure that the project would be completed in under the client's budget. As the one of a kind of project, extensive training was necessary to ensure proper completion.

The Results

The project was a huge success. The team at Flatworld Solutions completed it within budget, and the client was extremely satisfied with the project results. They even chose to employ Flatworld Solutions for future projects of similar size and requirement, and became a long-term client.

Choose Us for Highly Accurate Data Mining Services

Flatworld Solutions is a leading data mining service providing company based in India and has been serving clients globally for over a decade now. We are known in the industry to provide the best data entry services within a quick turnaround time though our multiple delivery centers without compromising on the quality. We provide our services at affordable prices which can be customized according to the project complexities and client requirements. We attribute our top-quality services to the cutting-edge technologies and state-of-the-art infrastructure we have access to.

If you are looking for a reliable, effective, efficient, accurate, and cost-effective data mining service provider, then look no further. Get in touch with us today!
