FIRST CHOICE HOME REMODELING

**Whoosh! First Choice
Home Remodeling
Streamlines Business
with ClockShark**

The story of First Choice Home Remodeling in Myrtle Beach, South Carolina, is an all-too-familiar one. The company was using an old-fashioned, mechanical time clock to keep track of employees' time. To track the jobs and tasks worked on each day, employees were asked to write notes on their punch cards.

Sounds reasonable, but this system was fraught with challenges. "If we had workers that went directly to a job site we had no way to track when they actually arrived or left," remembers manager Megan Gustafson.

Hand-written, incomplete notes made it impossible for the company's owner, Ellis Weaver Jr., to truly know where his employees were spending their time. Weekly job costing and payroll chewed up enormous amounts of company time.

Fortunately, Ellis and Megan replaced their antiquated, inaccurate time tracking process with ClockShark, and instantly things became easier. "I can now see when my employees arrive at a job site or the shop, when they take lunch, when they switch to another job or task, and when they leave for the day," declares Ellis excitedly. With ClockShark, Ellis and Megan abolished the process of hunting down inaccurate paper timesheets, and saved their company countless hours of extra work.

For construction and field service companies who want to get rid of paper timesheets, ClockShark is the mobile time tracking app that's both powerful and easy to use.

The Best Time Tracking App for Construction & Field Service
