

CUSTOMER SUCCESS STORY

 degreed

EXECUTIVE SUMMARY

BREAKDOWN

Degreed chose Fullcast because of its ability to bring together so many aspects of the go-to-market process. The platform allowed the ops team to consolidate tools while increasing its ability to automate system maintenance and focus on strategy.

THE COMPANY

Degreed is a leading learning experience platform. It provides a professional learning and development ecosystem for 400 clients in more than 200 countries. Its ops team of six powers a sales team of approximately 50 reps.

Degreed came to Fullcast to optimize its RevOps engine, territory modeling, and routing.

Territory Carving

Territory Modeling

Routing

Implementation

“What I really like about Fullcast is the ease of use, the simplicity of the platform, and the fact that it is integrated fully with Salesforce. We decided to use Fullcast for the full go-to-market process in terms of not just account assignments, territory mapping, etc. but also the lead routing piece. It truly made my life easier and my team’s life easier.”

Revenue Operations and
Enablement at Degreed

TERRITORY CARVING

PROBLEM

Geographies are not an important input in Degreed's territory carving, but with an ops team based out of California and Paris and a global sales team working on accounts across the world, monitoring city names and postal codes in spreadsheets made it difficult to accurately and effectively carve territories. Dealing with valuable new accounts was particularly difficult.

SOLUTION

Fullcast's robust mapping feature allows Degreed to conduct visual territory carving on a map easily. Plus, the ability to overlay any metrics (such as TAM) and view the balance across territories helps increase both efficiency and accuracy.

RESULTS

Using the map feature makes it simple to carve territories and identify any geos that are unassigned. Additionally, the ops person can easily jump on a call with the regional manager and use the map itself to facilitate a collaborative carving process in real time.

"Using the map, you just drag and drop and move things around really easily. I've never seen that in any other tool before," says Jonathan Malalis, senior manager of revenue field operations at Degreed. Before, Degreed relied on multiple pivot tables, downloading and refreshing new data using formulas, and then rerunning the pivot table. With Fullcast, spreadsheets are a thing of the past.

When we used spreadsheets for territories, there was a time delay. When there was a change, we had to go make a change in the system. So, that caused issues where the data was not accurate, and accounts were still being held in a previous territory. It got messy.

TERRITORY MODELING

PROBLEM

When modeling territories, such as for forecasting and balancing, everything was done in spreadsheets. Thus, the prep work required to do modeling meant either creating massive spreadsheets or uploading multiple iterations of the plan into Salesforce just to get a sense of what it would look like.

SOLUTION

Fullcast allows users to easily test and model many different scenarios without any spreadsheets. Because Fullcast is connected directly to Salesforce, the data is always fresh.

RESULTS

During planning season and throughout the year, the team can now have many different scenarios modeled out. When a change occurs, such as a recent acquisition, the team can decide which plan to deploy and then have it instantly reflected in their CRM and routing.

This saves Malalis four to five hours a week, and the entire sales organization gets full visibility into the GTM plan, with data that is always up to date.

“With Fullcast, it’s all in one place. We can make the model and tweak it as needed. For example, if sales leaders want different territory cuts, we can easily make those changes, and that will integrate back into Salesforce.”

ROUTING

PROBLEM

Prior to Fullcast, the Degreed team used four different routing tools, which required two people to actively manage. The team tracked rules in spreadsheets and then manually updated the tools whenever there were any changes to roles or assignments. Between the two resources, it became very messy. The team had to check back and forth to verify if changes had been made in all the required places. This resulted in leads being misrouted and other inaccuracies.

SOLUTION

Fullcast's lead routing is tied directly to the territory and GTM plan, so when a rep is reassigned to a territory or an account is assigned to a territory, the routing is automatically updated as well without requiring any intervention by the ops team.

RESULTS

Since Degreed consolidated its routing in Fullcast, it hasn't needed to touch anything except to update the actual rules. **"With Fullcast, our lead routing has become much more accurate," says Malalis.** Whereas the ops team previously had to spend significant time troubleshooting errors with lead routing, Fullcast has completely addressed all the sales team's previous complaints.

We never hear any complaints from our SDRs, which means that things are **running smoothly.**

Resource Depletion

Misrouted Leads and Inaccuracies

Complete Automation with Fullcast

IMPLEMENTATION

PROBLEM

The team had a tight timeline with its onboarding, starting in November and a goal of deploying their GTM plan in February.

SOLUTION

The Fullcast platform is tailor-made for revenue operations. Retrofitting a corporate planning tool can take six to 12 months, while Fullcast can be implemented in weeks.

RESULTS

Many corporate planning tools require a lengthy implementation process, including multiple iterations of business requirements and platform adjustments, plus the cost of professional services. With Fullcast, the Degreed team was able to complete onboarding and implementation for its 50+ reps in about six weeks.

“I’ve implemented Anaplan in past roles. It was a huge build. But with Fullcast, it’s all out of the box functionality,” Malalis says. **“The ease of use and setting up the tool was a huge benefit, especially since we were implementing it in November—at the same time we were doing our fiscal planning for the next year.”**

DECREASED IMPLEMENTATION TIME BY 88%
