

## Medium-sized furniture manufacturer focuses on process transparency

**PELIPAL**<sup>®</sup>  
Badmöbel

"We were thrilled by the easy installation of the process editor in our organization. Hence, we are able to establish a basis for e.g. future decisions about changes of software systems or investments in ERP systems."

— Paul Horstmann-Meyer, **Unternehmensgruppe Pelipal**

As one of the leading furniture manufacturers in Europe, Pelipal is offering professional services for furniture stores and corporate clients. By employing the Signavio Process Editor, Pelipal is facing the challenges of a demanding and highly competitive furniture market. The aim is to record the administrative processes in accordance with the already highly optimized production processes, to create transparency within the organization as well as to promote continuous process improvement. Pelipal stands out due to its high demand of quality towards itself and its products.

Due to its broad product range from disassembled furniture to exclusive design bathrooms, Pelipal is facing the challenge to fulfill different customer requirements.

Due to this, the Signavio Process Editor has been chosen by this internationally operating organization to allow a standardized recording of processes. Though, Pelipal is not only focusing on continuous process documentation but also on sustainable process optimization in accordance with a continuous improvement process (CPI).

The Signavio Business Transformation Suite has been available since April 2017. Signavio Process Manager unites Process Editor with Decision Manager. These are joined by Signavio Workflow Accelerator and Signavio Process Intelligence as part of the Suite.
