

Worldwide Commercial Real Estate

Who are they?

A global real estate firm with thousands of global employees and revenues in the billions. As a Fortune 500 company, it is one of the largest commercial real estate services and investment firms. It offers a broad range of integrated services, including facilities, transaction and project management; property management; property leasing; investment management; property sales; appraisal and valuation; mortgage services and development service.

Problem

- Managing resource utilization was difficult as governance policies could not be effectively monitored across AWS and Azure
- Consolidating information for a single view of costs was not possible leading to wasted spending and uncontrolled costs
- Modernizing legacy applications was not possible, which was a barrier to innovation

Solution

- **Simplified Management:** A single plane of glass view simplifies management and empowers IT to better control costs with pay-as-you-use pricing
- **Unified Cloud Management:** Role-based access control, entitlements, approved quotas and cost-metering policies enable IT to effectively manage resources across multiple clouds
- **Cloud Migration:** 'On-the-fly' containerization of applications makes them instantly portable to newer platforms, removing barriers to innovation

We had several issues within our IT strategy. We didn't have a clear understanding of the resources we were using across clouds, shadow IT was popping up, and we were unable to modernize key applications. With HyperCloud we easily addressed these problems. We can clearly see usage across clouds, we can respond to requests faster, eliminating the need for shadow IT and the 'On-the-fly' containerization has helped us innovate.
