

# World Fuel **increases** operational efficiency, precision, and visibility

Over the last few years, **World Fuel Services, a World Kinect Company** - the aviation division of a leading global fuel and energy distribution and management company - has relied on i6 Group to provide innovative, market-leading solutions to the complex challenges involved in providing world-class fuelling services.

Starting at London LTN in 2019, World Fuel chose our solutions because of our end-to-end real-time approach and global 24hr support. Our partnership continues to grow and thrive, with over 60 World Fuel locations around the world supported by i6 technology.

*With the transition to the cloud-based i6, we are thrilled to continue offering our clients a best-in-class technology solution and an updated user experience. i6 became a catalyst for our ongoing transformation, efficiency improvements, and enhanced invoicing speed and precision. And importantly, our customer fuelling experiences were elevated to extraordinary levels. Empowered with a comprehensive 360-degree view within our i6-operated airport fuel supply locations, our customers are receiving the operational excellence they expect from World Fuel.*

Physical Operations  
World Fuel*

## THE CHALLENGE

World Fuel needed to update and enhance their legacy client-server-based system which still required some manual data entry. They saw the need for a solution which provided improved communication and data sharing between operational departments, FIDS & ATG integrations, and robust stock accounting & reconciliation functionality, from a solution updated to the highest level of industry best practices.

## THE APPROACH

We provided an end-to-end solution which addressed World Fuel's needs across the entire fuel supply chain. Our Reconcile<sup>6</sup> fuel inventory and accounting platform allowed for precise fuel movement tracking and accurate reconciliation, while our Fusion<sup>6</sup> into-plane refuelling management platform provided full remote visibility of ground fuelling operations by connecting data from airports to airlines. To complete the solution, we also provided eHandshake<sup>®</sup> integration, allowing Pilots to interact digitally with Refuellers, which enabled fast, paperless refuelling, social distancing (a critical requirement during the pandemic), and reduced risk of over-fuelling.

## THE RESULTS

Our approach allowed World Fuel to self-deploy our end-to-end solution within a 14-day window with no physical presence required on-site, resulting in increased operational efficiency and a centralised view of stock logistics. Digital accounting provided a transition to 93% automated invoicing, and digital operations allowed for improved GPS vehicle tracking and data capture. This combined with increased platform security, world-class support and expertise, and easy-to-learn training packages, allowed World Fuel to continue to provide their customers with the highest possible level of service at their locations.
