## Innovative WebRTC IaaS Solution

## Project Overview

A California-based high-tech company needed to implement a time-saving and dependable Infrastructure-as-a-Service solution that would let developers build and deploy enterprise-grade WebRTC applications quickly and easily.

Oxagile's frontend engineers were responsible for the development of an innovative WebRTC API. The API solves browser compatibility problems by providing another layer of abstraction that hides browser differences and makes building production-quality WebRTC applications a breeze.

### Technology Stack

.NET, JavaScript, WebRTC

### Timeframe and Workload

**Duration:** 4 months

**Effort:** 8 man-months
