

From risk to value: Enhancing supply chain sustainability

“Our suppliers account for more than 95 % of our environmental impact. We need the visibility that IntegrityNext gives us to know where we can become more sustainable. This allows us to actively shape the green transition.”

Dr. Maximilian Schnippering
Head of Sustainability

Objective

Siemens Gamesa had traditionally focused on evaluating high-risk suppliers through simple questionnaires and on-site audits. However, they recognized the need to elevate their approach to the next level by automating, standardizing, documenting, and reporting sustainability performance for the entire supplier base.

This transition required rethinking their assessment methodology and expanding the scope beyond risk assessment to encompass both risks and performance evaluation.

How IntegrityNext Helps

IntegrityNext was chosen for its ability to provide broad transparency and scalability, making it ideal for assessing a large number of suppliers on the relevant ESG topics and identifying related risks and opportunities. With direct spend as the priority, the company had 70-80% of the targeted suppliers in monitoring within a short time. From now on, every new supplier will go through an IntegrityNext assessment.

Additionally, Siemens Gamesa uses EcoVadis to gain deeper insights into the sustainability performance of key suppliers.
