

Other Integrations

Challenge: Customers are using various systems for inventory management and accounting. Most of these do not have custom built integrations.

Solution: TPSynergy builds integrations to any systems when needed. For a small setup fee, we can integrate to any other system.

Case Studies: These are some of the custom integrations TPSynergy has done.

- **Amazon Vendor Central:** Download orders from Vendor Central and send the tracking number back to Amazon
- **Vend HQ:** Download orders from Vendor Central and post the orders to VendHQ. Then, automatically send updates to Vendor Central
- **Oracle E-Business Suite:** EDI orders from Seller Central are sent to Oracle ERP as sales orders, then advance shipment notifications are sent to Amazon.
- **SAP:** Orders and schedules that are created in SAP are sent to TPSynergy's Vendor Portal, and shipments are sent back to SAP as inbound deliveries.
- **SKUVault:** TPSynergy automatically checks the inventory in SKUVault and send order confirmation to Amazon. Also, shipments are sent to SKUVault to automatically reduce inventory.
- **Ordoro:** When an order from a site comes into Ordoro, TPSynergy automatically sends the order to the supplier. Once the supplier ships, the order status is changed in Ordoro
- **Shopify:** Orders from Shopify are sent to dropship suppliers., once the order is shipped, it updates in Shopify
- **BigCommerce:** Orders from BigCommerce sites are sent to dropship suppliers
- **Mimeo:** Amazon EDI orders are sent to Mimeo for printing. Once printed and shipped, an advance shipment notice is sent to Amazon
- **A2B Fulfillment:** Shopify orders are sent to A2B for fulfillment. Once finished, a shipment confirmation with a tracking number is sent back to Shopify
- **Stitchlabs:** Amazon orders are sent to Stitchlabs. Once shipped, the inventory status updates automatically
