

NDOT Technologies PVT Ltd

iStore

Case Study

Case Study

iStore

Need to develop an E-commerce web application which includes Content management system, stock management, with neat and elegant design and to provide flexible option to rent the item equipments. System provides the facility of selling items who has signed in the application. The purpose of this functional requirements document is to provide all of the information necessary such create a flexible and informative website that is easy to maintain.

Industry: iStore

Technology Used: Opencart – 1.5x – completed waiting for client response

Admin can add products under the different categories, such as Mac, iPad, Musical Instrument etc. User can buy the product and complete the payment by using Robokassa payment method. We are providing the solution to integrate all those thing using the Opencart.

Challenge

When the user logged in, he is offered with the service such as buy products, add favorite product, and Compare products. View Related models and related product.

Solution
