# One of the largest transport companies in North America digitizes compliance and training for driver fleet, operators and admins.

The multi-faceted logistics group has a proven history of safety, product handling and logistics services. The company operates bulk petroleum, chemical transportation, road transportation and rail siding.

CHALLENGE

Compliance with various crucial standards and protocols is mission critical meaning employees need to be fully trained and up-to-date at all times.

With many employees working away from a desk and drivers on the road, many teams were disconnected without access to a desktop to log in to an intranet or the time to attend regularly occurring in-person training sessions.

SOLUTION

Migrating compliance training to iTacit's digital platform centralizes employee-related functions onto a mobile-first hub that is easy to access and only requires a single log in. Drivers can even access while in the truck.

iTacit's Learning Management System (LMS) has replaced annual meetings and quarterly safety training sessions with packaged courses that allow administrators to easily track compliance values like attendance, completion numbers and more. Digitizing training such as this reduces risks, boosts accessibility, and makes it easy for employees to log in through their driver portal and stay consistently compliant.

+ More efficient compliance

Leads and administrators can quickly log in
and view analytics on every course, so they
can identify gaps and track employees who
need more training. Employees can access
their training on truck maintenance, safety
policies and more on the go—right from their
vehicles.

+ Accessible, easy-to-use training

For the organization's blue collar workforce
can now quickly sign in and locate training.
The My iTacit app allows them to do this and
more with a single login, and integrates with
their company driver portal.

+ Move from in-person to digital

With the My iTacit app allowing for a variety of
training content ranging from in-app authored
courses and third party training content, the
organization has been able to move their
critical fleet-wide annual and quarterly safety
meetings to iTacit's LMS as packaged SCORM
courses.
