

Klépierre runs 98 sites with Lighthouse scores in the high 90s

Problem

Klépierre is the leading operator of shopping malls in Europe. They were running 98 sites on a monolithic CMS. Growing cost of infrastructure to support these sites, along with poor performance led Klépierre to Uniform for help.

Solution

Uniform enabled Klépierre to keep their existing CMS in place, but to decouple page delivery from the monolith and to adopt a Jamstack approach without having to replatform 98 sites. The result was Lighthouse scores in the high 90s, 65% reduction on infrastructure costs, and 100% uptime.
