

Leading Indian Institution Enhances Security Performance with SonicWall's Next-Gen Solution

Amrita Vishwa Vidyapeetham deploys a high-availability security solution as part of their perimeter security strategy.

Business need

Amrita Vishwa Vidyapeetham is a leading private university that offers value-based higher education across nine campuses in India. With over 24,000 students and 1,700 faculty members, the institution's IT team faces the daunting task of securing its expansive digital perimeter. Their existing cybersecurity solution was insufficient in mitigating all network-related security risks. Additionally, they wanted to regulate the content accessed by the user community. As a result, the IT team decided to replace their current solution with an advanced and high availability security system.

Solution

During a detailed POC, Amrita Vishwa Vidyapeetham's IT team explored the robust features of SonicWall's Gen 7 NSsp Series security appliances. They discovered that the device could meet the demanding network security requirements of large organizations, including managing high-traffic loads and proactively defending against sophisticated cyber threats.

The team also appreciated that the solution required minimal training or technical expertise to set up and manage. So, they decided to deploy the SonicWall NSsp series with high-availability (HA) capabilities. Using the firewall's intuitive interface, the IT team efficiently navigated security settings. Additionally, they resolved all their queries and issues promptly with the 24/7 support provided by SonicWall's dedicated team.

Results

During deployment, Amrita Vishwa Vidyapeetham was able to quickly adapt to their changing security needs with SonicWall's seamless integration. After deployment, the institution's administration observed a significant improvement in their employees overall work efficiency, as they could focus on their tasks without concerns about security breaches.

Benefits

- Proactive threat prevention
- Maximum uptime
- Enhanced user experience

Solutions at a glance

- NSsp series with HA and Analytics Software

"Our overall experience with SonicWall has been highly positive, characterized by seamless integration and reliable performance that has significantly enhanced our network security."
