Secure Licensing and Distribution System

Project Overview

A well-established U.S. automobile company partnered with Oxagile to develop an advanced licensing system for handling the distribution of their proprietary product.

The resulting solution provides automobile service specialists with end-to-end license management capabilities — from incoming order processing to delivering valid license keys to the end user.

A special intermediary application coordinates all interaction between the end user, the licensing portal and the proprietary product, and includes the following structural modules:

- Internet connection setup wizard;
- Automatic update module;
- OS lockdown module;
- License activation module.

Technology Stack

C#, JavaScript, ASP.NET MVC, IIS, SQL Server

Timeframe and Workload

Duration: 24 months

Effort: 62 man-months
