

Life Saving Accuracy for Patient Vigilance Systems

Challenge:

In order to gain FDA compliance on it's Lifebed™ Patient Vigilance System, Hoana Medical needed to test and certify the system's embedded software.

Solution:

Hoana Medical chose VectorCAST technology to assist them through the software validation process by providing automation of all unit, integration and system testing activities.

Details:

Launched in 2002, Hoana Medical, Inc. is the world's leading healthcare company focused on "Intelligent Medical Vigilance" in acute care hospitals where approximately 200,000 people die from errors and mistakes. Hoana Medical used VectorCAST applications to test and certify the software embedded on its first FDA cleared offering, the Lifebed™ Patient Vigilance System. This device transforms any patient stretcher into an untethered 'alert network' for both cardiac and respiratory functions.
