

Martin Immobilienverwaltung – Property management

About the company

Martin Immobilienverwaltung – property management in Hückelhoven stands for the professional management and support of objects, real estate and buildings. Commercial, technical and general tasks are handled professionally within the scope of property management. Martin Immobilienverwaltung – Property management was looking for a real estate software that meets your requirements.

The requirements for the real estate software:

The manager and owner of the real estate company Marc Martin was frustrated: There was no system on the market of real estate software providers that met his requirements: a lean, cost-effective solution with functions tailored to his needs.

The new real estate software should do the following:

- In-house management of real estate, tenants etc.
- Automatic job notification via service app to internal and external employees (especially janitors)
- Order management directly via mobile phone
- Online retrieval of all coming, running and finished activities

Brixxbox Solutions Partner GEBRA-IT GmbH & Co. KG offered an individual all-round concept and used the **toolbox brixxbox** to map the requirements of the property management.

Reasons for choosing the brixxbox as real estate software:

- Future-oriented and flexible alignment of the software
- Coverage of company processes with maximum simplicity/ flexibility
- Fast implementation
- Easy adaptation the modular principle
- There is no comparable system on the market with so many possibilities for co-design

Reach your destination within just one week

"I have long searched for a program for my requirements and have not found anything comparable. GEBRA-IT has implemented exactly my requirements in a short time.

Marc Martin, Managing Director Martin Property Management

In a two-day workshop, our **Brixxbox Solutions partner GEBRA-IT GmbH & Co. KG** and configured them with the help of the brixxbox. After just one week, the finished system was presented, accepted by the customer and put into live operation.
