

What is the project about:

Mydining.de is an online food delivery service working in 2 states in Germany. With a delicious healthy daily menu and best german quality of service.

What a customer needed:

As it often happens a successful off-line business is looking for ways how to scale and grow the business on-line. Mydining.de is a net of german restaurants in 2 states, who decided to offer a new kind of fast and comfortable service for busy and demanding clients.

Mydining needed a clear, comfortable and fast website where a customer can easily find a favorite dish for delivery. We needed to solve the issue with a local binding, since the delivery is being served in 2 states only. Also, a client had his own schedule and we had to let the customers order only in certain hours.

We did it:

- Custom responsive design
- Order hours functionality
- Ordering by zip function
- Minimum order amount functionality
- Custom shipping methods
- Bundle products settings
- Related products settings

In a fairly short time we performed the first result for front-end - 4 weeks. We have created a comfortable and easy-navigating menu, as well as UI greeds for categories. Now, the user's journey is intuitive and fun. Farther customization of back end took us another 4 weeks. Website is being used for 3 month already.
