Renowned Institution in Sri Lanka Fortifies its Network Infrastructure with SonicWall's Advanced Solution

NIIBS implements security appliance to reduce internal breaches.

Business need

Nagananda International Institute of Buddhist Studies (NIIBS) is a prestigious government-recognized institute in Sri Lanka, committed to preserving, advancing and sharing Buddhist teachings and culture. With around 300 students, the institute offers a range of programs, combining in-person classes with digital learning materials accessible via a learning management system.

To ensure the security of its digital environment and reduce internal breaches, NIIBS wanted a robust network security solution with detailed access control for students, faculty and staff. In response, the IT team sought a sophisticated firewall that could meet these requirements effectively.

Solution

During a detailed POC, NIIBS received a first-hand experience of SonicWall's Network Security appliances (NSa) capabilities in providing multi-layered defense against cyber threats while ensuring seamless access for different users. The team was impressed by SonicWall's patented Real-Time Deep Memory Inspection (RTDMI™) and Capture Advanced Threat Protection (ATP) features that could detect and analyze threats in real time, enabling immediate remediation and significantly reducing the window of vulnerability. Along with its comprehensive features, NSa has a user-friendly interface that simplifies network management. So, NIIBS chose the robust NSa Series that integrated security features such as intrusion prevention, malware analysis and application control into a single appliance.

Results

Post-deployment, NIIBS witnessed enhanced overall security effectiveness with SonicWall's solution. The team was able to streamline operations, fortify network security and lower the cost and time spent on hardware and maintenance, enabling them to focus on their core educational mission.

Benefits

- Increased security effectiveness
- Intrusion prevention
- Proactive threat remediation
- Ease of administration
