As a leading provider of talent acquisition technology, [iCIMS](#) enables organizations everywhere to build winning workforces. With thousands of customers and users across 200+ countries and territories, iCIMS invests in best-in-class solutions to optimize experiences for users and job applicants. This means putting customer identity and access management (CIAM) at the center of that strategy.

Identity isn't just important — it's the cornerstone of applicant tracking, one of iCIMS' core solutions. However, iCIMS has faced CIAM challenges. Its homegrown

CIAM requirements.

“Partnering with Okta shows our customers that we’re using the best-in-class CIAM solution to create secure authentication experiences. Okta continues to raise the bar and helps us stay on the forefront of security standards.”

Kevin Schmidt, Principal Software Architect

Optimizing costs by consolidating disparate identities

Flexible options for customer identity deployment are necessary for business growth and market expansion, but building your own can be costly and time-consuming. With Auth0, iCIMS was able to choose from a range of deployment options, opting to deploy three private clouds across the United States, Canada, and Europe. This enabled the company to securely meet SLAs, fulfill unique authentication needs, and address data sovereignty requirements.

Using a custom database connection, iCIMS automatically migrated 500 million user accounts for thousands of existing clients to Auth0 user store in six months,

the burden on iCIMS' developer teams to custom-build integrations.

"We needed to centralize identity across our Talent Cloud and consolidate into a single solution to support our vision of unified experiences and integrations across the talent ecosystem," said Eric Connors, chief product officer. "Okta's vendor-neutral platform was crucial in enabling us to streamline operations and enhance user experiences across the board."

With extensibility solutions, iCIMS' development teams were able to refocus their resources on core business, leveraging developer-friendly SDKs and documentation to create custom identity flows and differentiate between user types, leading to a 50% improvement in time to market.

"Auth0's developer-friendly toolkits have greatly improved our engineering team's ability to unify identity," said Bryan Tedesco, SVP of Engineering.

Reducing chair swivels with seamless user experience

The key to long-term revenue growth is delightful user experiences. To serve both internal and external candidates, iCIMS had to solve for disparate authentication methods and identities within the same applications. With Auth0, the team found a unified solution that could treat different user types appropriately, providing a

separate authentication and authorization workflows for each user type, with the ability to configure identity policies and customize candidate experience based on whether a candidate is internal or external. External candidates are presented with [Social Login](#) options, while internal candidates use their corporate identity provider. Organizations also offer customizable email templates and login pages, creating an end-to-end, branded job application journey.

“Auth0 adoption has accelerated our ability to create vital universal experiences for our global customer community,” says Conners.

Social Login has also helped attract and keep new job seekers by fast-tracking the signup and login process with platforms they already use. With Auth0, iCIMS established its Indeed integration five times faster than it could have before, earning 433k users from the platform in a single month.

Boosting security to augment in-house teams

Identity and security go hand in hand. Since iCIMS handles high volumes of Personal Identifiable Information (PII) for its customers, including W-2 and direct deposit details, data protection is paramount to its reputation and business continuity.

is deemed high-risk. This feature gives iCIMS users seamless access to the applications they need while maintaining strong security. [Attack Protection](#) further safeguards iCIMS' customer data by easily detecting bots, identifying users who were part of a third-party breach, and blocking traffic from IP addresses that attempt too many logins.

“Partnering with Okta shows our customers that we’re using the best-in-class CIAM solution to create secure authentication experiences,” Schmidt said. “Okta continues to raise the bar and helps us stay on the forefront of security standards.”

Partnering for long-term success

Okta and Auth0's extensibility and flexibility have helped iCIMS reduce costs, drive user growth, and bolster security across its organization. In 2023, over 3 million business users around the world used Okta to access iCIMS apps. iCIMS also processed more than 200 million job applications through Okta in 2023, helping its clients hire 5.5 million people. None of this would have been possible without Okta, and the organization will lean into this partnership as it prepares for the future.

"Without the invaluable support and guidance from Okta's Technical Account Management (TAM) team, coupled with the resources from our Gold Premier
