

PowerFolder meets ONLYOFFICE to Provide Document Editing in the Cloud

[ONLYOFFICE Document Editors](#) have brought powerful viewing and editing capabilities for documents, spreadsheets and presentations to the [PowerFolder web services](#). Learn more about our partnership.

ONLYOFFICE Document Editors have been integrated as a part of PowerFolder sync and share solutions. The online editors enable users to view, edit and collaboratively work with documents, [online excel spreadsheets](#) and presentations without leaving PowerFolder interface or installing additional software.

Developed in HTML5 with the use of Canvas element, ONLYOFFICE Document Editors ensure 100% view, conversion, print and pagination fidelity. The editors, fully compatible with MS Office formats, offer all types of formatting options as well as broad collaborating capabilities, such as online co-editing and reviewing, commenting and built-in chat.

All the ONLYOFFICE editing and collaborating features is **now available for the PowerFolder users**. The latest version of ONLYOFFICE Document Server with all the recent updates and improvements is supported starting from PowerFolder v.10.5.

Christian Sprajc, CEO of PowerFolder:

"We choose ONLYOFFICE Editors due to their high compatibility with MS Office formats. Now we are happy to announce that, as the integration is completed, work with PowerFolder has become more comfortable".

About PowerFolder

PowerFolder, head-quartered in Meerbusch, provides enterprise 'sync-and-share' solutions since 2007. Thousands of companies worldwide and the majority of German universities choose PowerFolder to store their data. PowerFolder users can access organization files from anywhere, collaboratively edit and share them with internal and external users. Safety and security are the top priorities of the PowerFolder services. The data is encrypted and stored according to German data protection regulations on German servers or on-premise.

About ONLYOFFICE Integration Edition

[ONLYOFFICE Integration Edition](#) is an advanced component that enables you to view, edit and collaboratively work with documents, spreadsheets and presentations directly from your web application.
