

How Tabule Serves Up Smarter Scheduling

WITH PUSH

A Taste of the Middle East, Born in Midtown Toronto

Tabule first opened its doors in 2005 in Toronto's Midtown neighborhood, quickly earning its place among the city's top restaurants. Founded by Chef Rony Goraichy and Diana Sideris, the restaurant became a local favorite for its homestyle Middle Eastern cuisine, warm and welcoming atmosphere, and commitment to quality in every detail — from food to service. With Chef Rony's expertise of traditional dishes, and Diana Sideris eye for exceptional service, Tabule struck the perfect balance between authenticity and hospitality.

Over the years, what started as a single neighborhood gem has grown into an award-winning restaurant group with four locations across Toronto. As the business expanded, so did the need for smarter, more scalable tools to manage their growing team and day-to-day operations.

"What sets us apart from the competition is that we really pride ourselves on being able to deliver great food to everybody that walks in through our doors."

We recently connected with Tyson Brocklesby, General Manager of Tabule Riverside, to learn how Push's all-in-one people management platform has helped them simplify their multi-restaurant operations.

A Full Plate: The Pre-Push Challenges

Before using Push, Tabule faced time-consuming operational challenges, especially when it came to scheduling. The team was juggling multiple platforms and spending hours buried in spreadsheets just to organize scheduling. That left little time to focus on what truly mattered: delivering a consistent experience for both their employees and guests.

These manual processes often led to scheduling errors, inefficiencies, and frustration across the board. As Tyson shared, "One of the biggest challenges we faced before introducing Push was ensuring we could provide a seamless, consistent experience, not just for our guests but for our team as well." It was clear that their current system wasn't cutting it, and something needed to change to keep pace with their growing operations — this was when they discovered Push.

"One of the biggest operational challenges that we had before introducing Push was really ensuring that we're delivering a consistent experience to not only our employees, but also to our guests."

Dishin' Out Consistency With Push

Since bringing Push on board, Tabule has seen a big change in how they manage communication, labor costs, and day-to-day operations. With Push's easy-to-use messaging tool, Tyson and his team can now communicate not just within individual stores, but across the entire company, making it easier to deliver consistent messages and updates. Push has also made it simple for managers to see how their schedules are affecting labor budgets in real time. According to Tyson, "If we're over-scheduling or under-scheduling, Push allows us to go through it with a fine-tooth comb to better forecast and plan for our business." Rather than guessing or making last-minute changes, they can make accurate scheduling decisions from the start.

Tyson describes Push as a **"one-stop shop"** that has helped Tabule better manage its growing business while continuing to deliver the consistent guest experience they're known for.

"Push has positively impacted our labor cost management by allowing us to see in real time how our scheduling will ultimately affect our budget. We're able to input our forecasts, and as we write the schedule, we can see when labor costs are looking a little high."

Push's **all-in-one** platform offers everything you need, like the perfect meal at Tabule

Pre-Push Struggles:

- ✗ Managing multiple, disconnected platforms.
- ✗ Delivering an inconsistent employee experience.
- ✗ Manually scheduling for hours using spreadsheets.
- ✗ Dealing with frequent errors and inefficiencies.

Post-Push Bliss:

- ✓ Monitoring multi-location performance with a single dashboard.
- ✓ Automating scheduling with a seamless system.
- ✓ Communicating easily with company-wide and individual messaging tools.
- ✓ Forecasting labor and managing budgets in real time.

Tabule's New Recipe for Success

With Push's scheduling tool, building and managing schedules at Tabule has become faster and easier. Instead of spending hours manually creating spreadsheets, managers can simply log in, view employee availability, and build schedules in a fraction of the time. Once a schedule is published, team members can easily swap or give up their shifts right from the app. If something unexpected comes up, employees can make their shift available, and another team member can pick it up with just a few clicks — skipping the back-and-forth phone calls and emails.

Beyond scheduling, Push's communication tools have also been a game-changer. Tyson and the team can use the messenger function to send out company-wide updates, with employees receiving them instantly on their phones or when logging in to start a shift.

As Tyson explains, **"The biggest feedback we get from our teams about Push is the messaging feature — it's a great way to ensure consistent communication. For example, if someone's off on Tuesday and we send out a menu update, they'll still see it when they clock in on Wednesday. Everything's right there for them, so they're not chasing information. They can come in, get up to speed, and focus on delivering a great guest experience."**

Overall, Push's all-in-one platform has made it easier for Tabule to provide a consistent experience for employees, while making day-to-day operations more efficient and employee-friendly.

Easily pick up, swap, and manage shifts right from the app.

Build a full week's schedule in under 10 minutes with auto-scheduling.

Message teammates directly to stay connected and in sync.

Easily create and customize shift templates.

Track hours and labor costs in real time with built-in timekeeping.

Use real-time analytics for accurate labor forecasting.

More Than Just a Tool, Push Helps You Scale With Confidence

As Tabule prepares to open its 5th restaurant location in Oakville later this year, Push is playing a key role in supporting the restaurant group's growth. With each new location, scaling becomes more complex, but Push makes it easier to stay connected and consistent across all of them.

The scheduling and messaging tools have become essential for ensuring smooth communication between the team and making operational adjustments at an enterprise level. The Tabule management team relies on Push to streamline labor forecasts, schedule shifts quickly, and keep employees in the loop with important company updates. As Tyson explains, "The enterprise feature is great because it gives us a bird's-eye view of the organization. We can see how certain stores are performing compared to others and identify opportunities to share knowledge and grow as a business."

As Tabule continues to expand, Push isn't just a tool — it's a true partner in driving the business forward, helping the restaurant group maintain its high standards while scaling with confidence.

"Push is going to play an integral part in our growth and success in the future. The scheduling, the messaging, the labor forecasts — these are all really important tools that we, as operators and managers, need to use to not only manage our business but also grow it."

"I would recommend Push to anybody in the restaurant business, especially if you've got a large operation. It makes scheduling and communicating with your teams consistent and easy. It takes the time that you would be spending in the office and allows you to be on the floor impacting your team and your guests."

Simplify your restaurant's operations and grow with confidence like Tyson and thousands of other happy clients using Push!
