

Website Development for Caldeyro Victorica

Caldeyro Victorica is a real estate company located in Uruguay, its business is dedicated to marketing luxury properties, for rent or sale, throughout Uruguay. Within its catalog, users will find everything from luxury condos to houses and even islands.

Website Development

We were responsible for developing a website that was consistent with the quality of your business. Our engineers used Drupal 7 to develop a self-managing website where the company can display all properties for sale / rent and users can locate specific types of properties with the use of facet filters that allow navigation through different filters at the same time. . We integrated a search bar to further improve navigation, after all, Caldeyro Victorica has around 3000 properties to offer.

Main Points

Our main objective when developing this project was to make it a multi-language site with integration with social networks, automatic publications with Mercado Libre, responsive development and search engines with more than 3,000 registered properties.
