

## Development of a Platform to Request CEPADDEM Procedures

For this project we developed under Laravel technology a management system for requests and claims for Negotiable Payment Certificates of the Second Game of the Thirteenth Month (CEPADEM) that are delivered by the Ministry of Economy and Finance (MEF) of Panama. This project implemented various services, from software consulting and obvious web development, to services such as graphic design and training.

## Main Purpose Behind this Project

The main purpose here is the development of a platform where citizens can register and find available forms to make claim requests, requests for beneficiaries of the deceased and CEPADEM requests for non-retirees, as well as being able to receive care for any queries. Regarding the delivery of these certificates, the platform has an application management system to go through different states, review approval or ask the citizen to correct their request if necessary. In addition, the platform helps one to know if he is a CEPADEM beneficiary by simply entering his ID or social security number to gain access to the information.

## Results

According to Ser.TV, in mid-2019, the platform had successfully assisted in the delivery of CEPADEM to more than 400 thousand beneficiaries. The MEF Investment Programming Directorate is awaiting validation by the CSS of approximately 50 thousand beneficiaries for proceed with printing.
