

Website Development for PanamericanWorld

PanamericanWorld is an online brand whose vision is to communicate the Americas in English, Spanish and Portuguese by publishing relevant news and original featured content.

Main Goal

PanamericanWorld's primary goal is collaboration when it comes to content creation, so with Drupal we were able to develop a website that meets customer needs. Outstanding

needs of the page: Multilingual site (EN, ES, PT), content moderation and access with Facebook and Twitter. It is a self-managed site with login features where users can login and create draft articles that will then be reviewed by the PanamericanWorld team so that they can approve the publication of the article. The login section allows you to enter with Google and Facebook, and users can filter all articles by country if they wish.
