

New Features and Improvements to the Look and Feel of the Solution for Sura Panama

The organization's digital layer was consulted, web services were implemented, new modules were made, and the look and feel of SURA's digital layer was improved. For this project, our Rootstack team focused on certain services, such as:

Solution's Look and Feel Enhancements

The improvements to this solution were: Add in the header the information of the user with the role of the system, reimplementation of the complete left sidebar menu with hierarchies, improvement of the tables based on the new design, improvement of the page in relation to new design, improvement of the responsive menu, implementation of breadcrumbs throughout the project, user registration, and improvement of the user registry layout in desktop and responsive.

Help Administration

On the development of help administration backoffice, we include a: Help tree left listing, help information page, and help content search engine.

Web Services were Developed which Allow Obtaining Information from the SURA Data to be able to View it on the Insurance Brokers Portal

Services such as: Initialization of web services project and web services layer, implementation of logs of requests for web services, implementation of production dashboard endpoint, implementation of Claims dashboard endpoint and implementation of delinquency dashboard endpoint.
