

## Website Development for Unibank

Unibank is a bank established in Panama as one of the first level banking institutions, it is recognized for its outstanding attention and financial solutions.

One of our passions as a company is to work with online banking platforms and with Unibank we had the opportunity to do so, we developed a new website for them with a

modern and personalized design that goes hand in hand with the bank's brand.

## **The Most Important Characteristics for us in this Project, as well as for Unibank, were:**

Multi-language site, adaptive web design and integration of online banking. This website is completely self-managing, it has a secure banking platform and after a while we review its design and update the home page to make sure it doesn't go out of style.
