PROVIDED SOFTWARE TESTING OF SAAS PLATFORM TO A SCANDINAVIAN STARTUP

The Client

Our client in question is a successful Scandinavian startup company. They have a unique product in the market in the form of a SaaS mobile dialogue platform for businesses.

The Requirement

The client's product aims to improve the way global organizations communicate with their employees, partners, or customers by broadcasting future targets, pep talks and results directly to the concerned people. What sets their product apart is the fact that their platform allows businesses to see the action being taken on their messages in real-time, and also provides them with a detailed analytics dashboard.

Given the fact that the client's platform was still under development with new features being added on a regular basis, they were on the lookout for a partner who could provide them with a part-time resource, who in turn could perform exhaustive QA and testing for their platform, including the following -

+ Rigorous testing of all existing code
+ Extensive Performance, Load and Penetration testing
+ Testing their platform performance on various browsers and mobile devices

The Challenge

As the project was important to fulfill client's business ambitions, they wanted additional flexibility of a part-time resource who could perform all necessary QA tests whenever a new build was released.

Our Solution

Based on the client's requirements, we were able to provide them with a professional and highly experienced QA Tester who is currently performing the following tasks for them -

+ The Tester works every Tuesday without fail on the client platform, as soon as a new build is released
+ The Tester also helps develop automated scripts while working closely with the development team based out of Netherlands
+ The Tester ensures that all updates and changes to the client platform are incorporated flawlessly, and the build goes live on time with the best possible quality

The Results

With the help of our experienced QA resource, the client have got their SaaS platform up and running smoothly without any bugs and issues. Our services have left the client extremely satisfied, so much so that they also hired a team of Quality Analysts for the same project from us, and are currently looking into hiring a development team as well.

This success story on software testing has also allowed the client to gain enough confidence and extend a similar solution to his other subsidiary offerings.

Choose Flatworld Solutions for Your Software Testing Projects

At Flatworld, our software testing services are backed by a 14 year legacy of testing expertise that spans across automation, consulting, performance testing and specialized testing. Our global clients can not only vouch for the spectrum of testing services we have to offer, but also for the quality of our resources and our delivery capabilities.
