

Protection and control of company's sensitive documentation with SealPath IRM

THE ITALIAN LEADING COMPANY IN THE FIELD OF DIY PROTECT ITS OWN SENSITIVE INFORMATION WITH SEALPATH ON-PREMISE SOLUTION

BRICOFER Italia currently has 62 outlets specialized in "Do it yourself" from the Swiss border to Sicily, 400 suppliers that line up more than 50,000 product lines on its shelves: Significant number of products and size of the company has led to choose Sealpath IRM for the protection of documents and files Server, managed by the headquarters in Rome.

Bricofer is the ideal solution for anyone looking for a serious partner, reliable and competent, able to offer the right advice and provide the best tools to shape their ideas.

THE CHALLENGE OF BRICOFER - TARGET

The Bricofer evolution is large due to the development plan that the group is carrying out, which has involved an indispensable adjustment and consolidation of the IT infrastructure over the years.

“What makes SealPath very interesting is the possibility of revoking the privileges of user access to any file when it is no longer necessary, remotely and wherever the copy of that file is stored”

Bricofer has identified its security needs that needed to be addressed: *“When you work with other companies, you usually share documentation with them. In these cases, security is fundamental and therefore we decided to look for a solution that would allow us to exchange information in a totally safe way,”* says Vittorio Cimin, IT Manager of Bricofer.

THE SOLUTION. WHY SEALPATH IRM?

“For a long time, we have been looking for a last solution that would allow us to protect the information sent out of our offices electronically. The rapid implementation of this tool has been made possible thanks to the minimum training required by the end user ”, explains Vittorio Cimin.

Bricofer had already explored other types of security and confidential document sharing solutions, but with SealPath Enterprise On-Premise, deployment and use by end users was the easiest.

A PoC was launched in less than one business day and it made possible to verify the effectiveness of the solution in terms of protection and data control.

“What makes SealPath very interesting is the possibility of revoking the privileges of user access to any file when it is no longer necessary, remotely and wherever the copy of that file is stored”, claims Vittorio Cimin.

RESULTS

“SealPath is the perfect tool to ensure data protection wherever the file is stored”.

The awareness of data protection now represents the main asset of any organization. It is increasing, which was now even more reinforced by the entrance of the GDPR. The SealPath’s platform allows you to comply with the GDPR directive efficiently.

The goal of SealPath is to enable companies to disseminate and / or extend the cybersecurity culture.

“SealPath is the perfect tool to guarantee data protection wherever the file is stored (USB disk, email, internet, smartphone, etc.).

“Currently, thanks to the automatic protection of the folders in the file server, the use is even more transparent for users” concludes Vittorio Cimin.
