ONNERA GROUP

INDUSTRY/SECTOR
Equipment for catering, laundry and cold applications.

REQUIREMENT
GDPR compliance and protection of sensitive information.

PRODUCT
SealPath SaaS & Data Classification

REGION/COUNTRY
Spain & Poland.

ONNERA GROUP

Onnera Group strengthens the security of sensitive files using SealPath without altering the user experience

"We were looking for a solution that would protect the most sensitive, confidential files in the group without hindering anything. Now, we always have control of the documents without altering the way our users work. Security is intrinsically imbedded within the file".

- Iñaki Bizarro, IT Manager at Onnera Group

ABOUT ONNERA GROUP

Onnera Group is an international business group dedicated to providing equipment solutions for catering, laundry, and cold applications. It is one of the main business groups in its sector worldwide, with a presence in more than 90 countries and leaders in Spain.

Onnera is made up of brands like Fagor, Edenox, Efficold, Asber, Danube, Domus, and Primer in a total of 9 industrial plants, 35 delegations, and more than 2,000 professionals. The company, based in Oñati, Spain, markets its products on 5 separate continents, equipping large hotel chains like Hilton and Marriot.

THE CHALLENGE

Onnera came from a document security environment based on access to tools such as OneDrive and Office 365, where they stored all their files. They were clear that they wanted to increase security, but above all, to be in control.

In addition to wanting to better comply with the GDPR by protecting personal data, the objective was to keep critical product information safe even if it was extracted from the file server or sent to third parties. For the company, it was essential that the solution did not generate obstacles for the user, all while granting advanced controls.
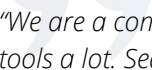

The IT team needed a simple tool to manage that would facilitate effective control, since the departments themselves had to be able to know what information they handle and to whom they must share it. In short, they were looking for a solution that would adapt to their organization without difficulty and that was simple to both apply and manage.

THE SOLUTION

Before deciding on SealPath, they analyzed other options in depth, but ultimately found them very complex and requiring a lot of resources. The decision was a thoughtful one. The company conducted various tests before starting the process for the PoC. After the successful proof of concept and without further delay, the deployment was carried out by areas and without any type of incident.

The users and heads of each department welcomed the tool with open arms since it solved their concerns when handling and sharing sensitive documents. Among the key points that made Onnera choose SealPath was the automatic protection of folders and the ability to revoke access permissions in real time.

"We are a company that compares tools a lot. SealPath seemed very different from other solutions", says Iñaki.

BENEFITS

SealPath has made it possible to largely control all the sensitive documentation that is generated and shared, especially by making departments better aware of their use. The functionalities of SealPath have facilitated the control of the files without altering the users' day-to-day, thus avoiding risk or rejection of their implementation.

Managing SealPath and monitoring access so easily makes it easier for the IT department to maintain control, as well as being able to focus on other priorities with peace of mind.

"The users of our organization see the functionality of SealPath, and that is why it was well received, because it comes to solve problems and concerns that they have when handling more confidential documents", emphasizes Iñaki Bizarro, IT Manager.
