Secure-Rite Mobile Storage Speeds Design Process 10X with Autodesk Inventor and Customized Training from IMAGINiT

Founded in 2005 in Kelowna, British Columbia, to meet a growing demand for secure, portable storage facilities, **Secure-Rite Mobile Storage** has expanded to multiple locations throughout British Columbia and Alberta. It is now one of Western Canada's leading providers of shipping containers, and it has a modification division that uses shipping containers as building blocks to design, build, and finish custom structures.

The Challenge

Making the Switch to Autodesk Software

Darnell Reimer, the Designer and Estimator at Secure-Rite's modification division, was looking to upgrade their 3D design software used to design custom buildings out of the shipping containers. "I needed better functionality, more capabilities, and to ensure that the software selected would be compatible with software used by the companies we contract with to build the structures," said Darnell.

"After evaluating several options, I determined that Autodesk AutoCAD, Revit, and Inventor met our needs for numerous reasons, including that AutoCAD and Revit are industry standards and that the Inventor output would be compatible with the software used by our constructors."

The Solution

Teaming with IMAGINiT for Software Installation and Training

"To avoid delays that can come from software installation problems or getting up-to-speed on new tools, we decided to hire outside experts for installation and training," said Darnell. "I reviewed the reseller partners on Autodesk's website and selected IMAGINiT, because they are a Platinum partner with a large technical team of industry experts, as well as a team of Autodesk certified instructors who are well versed in the software and teaching."

Darnell and IMAGINiT developed a solution that included software implementation services as well as two days of customized in-person training.

The Results

Projects Completed up to 10x Faster

"The whole process went smoothly," said Darnell. "Since IMAGINiT completed the prep work ahead of time, the hands-on training provided by the instructor was specific to our requirements, it covered picks and clicks as well as best practices, and the interruption to my work schedule was minimal."

After the training and implementation was complete, Darnell quickly noticed a huge difference with the new design software. "Projects can now be completed about 10 times faster in Inventor, I can say that this is easily one of the best investments we've made." He continued, "I'm happy that this process introduced me to IMAGINiT. The team was interested in getting me what I needed quickly and with minimal disruption. They made it easy. I will definitely contact them as additional needs for Autodesk software, training, or support arise."

Solutions Beyond Software
IMAGINiT Technologies, a division of Rand Worldwide, helps architects and engineers become more proficient in the use of 3D technologies to design, develop and manage complex engineering projects faster and more cost-effectively.
