

CREATED MOBILE APP TO ACCESS SECURITY CAMERAS

The Client

The client is a provider of customized security solutions. Apart from being associated with security management, the client also enables businesses and individuals to effectively protect personal and business assets.

The Need

Flatworld Solutions' challenge was to create a customized security system that would allow their clients to monitor security cameras using

mobile phones.

The Solution

A simple and convenient mobile app was created for the customer that allowed mobile phones to connect to the security cameras.

The Result

Flatworld's mobile application solution allowed the users to remotely check on their home or office security cameras at all times. Furthermore, the mobile app which was developed could be supported by most phones that support the streaming standard of 3GPP. This made it compatible with mobile phones such as Nokia, Motorola, Sony Ericsson and HTC.

Tools and Technology

- + Visual C++ for Desktop Application
- + Visual C++ 6.0 / 2003 / 2005 for OS Developing
- + H.264 Codec for Streaming
- + DirectShow for Filter

The mobile app development team at Flatworld Solutions has experience creating mobile solutions for all popular mobile platforms like iPhone, Android, Windows, Symbian, Blackberry and others.
