

Healthcare Solutions Case Study

Penrad Imaging

Performing Ahead of the Curve

The Challenge Penrad Imaging is the largest freestanding radiology leader in Southern Colorado. During the summer in Colorado, rampant wildfires caused Penrad to initiate a Disaster Recovery plan that would allow them to remain compliant with federal regulations in the event of a natural disaster or other unforeseen emergency. They needed expertise in assisting them through the overwhelming business drivers and IT options all without adding significant overhead to their IT staff.

The Solutions II Difference Solutions II performed a complete network assessment to gather information on all of Penrad's environment. This information, along with several meetings and service engagements, allowed Solutions II to offer customized recommendations to Penrad. The final solution provided several benefits:

- ☞ Highest level of protection, replicate data bi-directionally
- ☞ Protect production workloads independent of location
- ☞ Refresh of environment to reduce operating expenses
- ☞ Improved recovery times for all types of events

The impending implication of a natural disaster increased the priority of this project and Solutions II was able to deliver a solution with a significant positive impact, while staying within budget.

The Ultimate Result

- ☞ Improve Disaster Recovery capability by replicating all mission critical servers in a standby state
- ☞ Mitigate loss of revenue in the thousands of dollars an hour
- ☞ Savings of \$75,000+ in Operational Costs
- ☞ Improve Penrad's client satisfaction and reduced impact to the community by ensuring data availability
- ☞ Provided a Scalable Solution that allows for future Growth

"Solutions II has been with us through this entire project. Their knowledge of the Healthcare Industry, along with their expertise makes them a strategic partnership for Penrad Imaging."
