

## FLATWORLD PROVIDED SPACE PLANNING AND FLOOR PLAN DESIGN SERVICES TO A CALIFORNIA-BASED CLIENT

### The Client

The client is based in the United States (California) and serves building owners, package couriers, and package recipients with parcel management services throughout North America. They serve universities, retailers, multifamily complexes, and commercial buildings. Their services are geared toward making parcel tracking and delivery an easier process for all parties via their 24/7 service.

### Client Requirements and Challenges

The client needed an experienced space planning partner to help them with mailbox placement and floor plan design in residential complexes. They wanted a proven track record of delivering high-quality design services on time. While the initial volume was not high, the client needed a partner that could quickly scale up to higher volume if the initial project was successful.

The project involved two primary challenges -

- + Provide optimal use of limited space
- + Create an appearance that was compatible with the existing complexes

### FWS' Solution

After analyzing the client's requirements and the involved project challenges, the Flatworld Solutions space planning specialists developed this solution -

- + The team included an account manager, a quality analyst, and a dedicated layout expert
- + AutoCAD was used for the project
- + Final layouts featured a combination of privacy, practicality, efficient use of available space, and pleasing aesthetics that were consistent with existing building styles
- + The team delivered 15 layouts monthly to the client

### The Results

This space planning project illustrates the importance of choosing an outsourcing partner with an established track record for timely delivery and high-quality. During the past two decades, Flatworld Solutions has handled thousands of specialized and difficult assignments - all of them involving cost-effective pricing and strict quality control.

### Outsource Space Planning and Design Services to Flatworld Solutions

Flatworld Solutions (FWS) is a pioneer in providing quality [space planning and design services](#) a series of other [architectural engineering services](#) to its global clientele. We have a team of space planning experts that include AutoCAD specialists, layout experts, and architects.
