EarthSoft, Inc. has been using Syncfusion components for nine years as part of the EQuISTM product line. With thousands of end users in over 43 countries, EQuIS™ is the leading environmental data management system in the world. EQuIS™ uses Syncfusion XlsIO to create technical reports as Microsoft Excel files. Mathew Weaver, chief technical officer at EarthSoft, found Syncfusion Essential XlsIO to be the best component that satisfied all of the requirements for high-performance, fully .NET-managed code with a royalty-free licensing model.

XlsIO is a .NET library that can read and write Microsoft Excel files. It features a full-fledged object model similar to the Microsoft Office Automation libraries. XlsIO can be used on systems that do not have Microsoft Excel installed, making it an excellent reporting engine for workstation and server environments. "For creating Excel files in managed code, XlsIO is a great tool," Weaver said. He commends the excellent performance and portability of XlsIO, as well as the great technical support provided by Syncfusion.

The Benefits

24		
Above average support	Quick and efficient tools	Good performance
