

DEVELOPED A TASK MANAGEMENT APP FOR ANDROID AND IOS

The Client and Their Requirement

Our client, who was also a previous customer, is an Australian company who approached us with an immediate requirement for building a mobile app solution. They wanted us to build a task management app, with the help of which users could create tasks and assign the same to their contacts while gaining the ability to track the progress of the task in real-time.

Project Challenges

Our team of mobile app developers faced the following challenges during the development phase of the task management app:

- + This was a completely new idea for an app as such an app had never existed before, hence the conceptualization of the app had to be done from scratch
- + The client was very particular about the UI and we had to see to it that we delivered the best user interface as per their requirements
- + The client wanted real-time chat to be integrated within the app for all users following a particular task

The Project Plan

Keeping in mind the client requirements the following project plan was devised and implemented:

- + A dedicated team of mobile app developers was assigned to work this project
- + Since the client was very particular about the UI, we had a special team working on the user interface of the app
- + It was decided that the iOS version of the app would be developed first followed by the Android version later on

The Flatworld Solution

After analyzing the various requirements of the client and the project challenges, our experienced team of mobile app developers devised the following solution:

- + The task management app was built for both Android and iOS users while sticking to the clients' feature-list requirements
- + Using this app one could create a wall of tasks and assign them to their contacts
- + The progress of the tasks could be tracked in real-time by everyone involved in the task
- + People could collaborate on various tasks and work on them together
- + Completed tasks could be archived for future reference as well
- + We implemented robust chat functionality within the app by using a secure third-party plugin

Choose Flatworld Solutions for Mobile App Development Services

The client was delighted to see our work and with our professional approach towards the execution of the project. Flatworld Solutions has been in the [mobile app development](#) domain for about a decade now and has served several clients across the globe. Our team comprises of highly-qualified individuals who are skilled in developing mobile apps for different platforms such as [Android](#), [iOS](#), [Windows](#), etc.

If you have any such app ideas and you think it can be the next big thing, feel free to [share the idea with us](#) and we will get back to you within 24 hours.
